

or copying to the electronic information that corresponds to said actual object. --

REMARKS

These claims are fully supported by the originally filed application. Claim 41 is supported by Figs. 37(a) and 37(b) and the description on page 71, lines 11-21 and is directed to an information processing apparatus. When displaying an electric information linked from an actual object, the display mode or symbol for the electric information is varied so as to indicate the presence or absence of a link with the actual object. Claim 42 provides that a standard icon is displayed as the display mode of the electronic information when a link to an electric object is absent and a modified icon is displayed when a link with an actual object exists.

Claim 43 is supported by Figs. 35 and 36 and the description at page 69, line 7 through page 71, line 10. Claim 43 concerns an information processing apparatus in which, when editing an information linked from an actual object, a user is provided with a confirmation display message.

If there are any questions regarding this amendment or the application in general, a telephone call to the undersigned would be appreciated since this should expedite the prosecution of the application for all concerned.

Therefore Applicants respectfully request a full and thorough examination on the merits of the Claims 41-43.

Respectfully submitted,

September 5, 2001
